Image Processing API

REVIEW

CODE REVIEW 9

HISTORY

▸ **src/file.ts** 4

▸ **src/processing.ts** 2

▸ **README.md** 1

▸ **src/routes/api/images.ts** 1

▼ **src/routes/index.ts** 1

```
1 import express from 'express';  
2 import images from './api/images';  
3  
4 const routes: express.Router = express.Router();  
5  
6 routes.use('/api/images', images);
```

AWESOME

Using custom middlewares is a good way to intercept requests and implement functions.

7

```
8 routes.get('/', (request: express.Request, response: express.Response): void => {  
9  
10   response.status(200).send('Server working');  
11 }  
12 );  
13  
14 export default routes;
```
